

# CHISAGO LAKES LAKE IMPROVEMENT DISTRICT NORTH CENTER-NORTH LINDSTROM CHANNEL MAINTENANCE

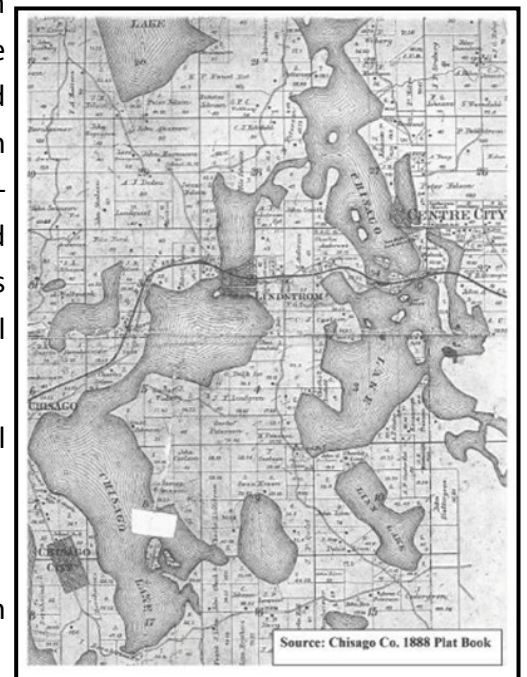

## Partners:

- Chisago Lakes Lake Improvement District
- Emmons & Olivier Resources, Inc.
- Adjacent Property Owners

In 2015, per recommendations of the North Center North Lindstrom Channel Restoration Feasibility Task Force, the Chisago Lakes Lake Improvement District (LID) Board of Directors recommended postponing further action on widening the channel between North Lindstrom and North Center Lakes until after a new County State-Aid Highway (CSAH) 20 bridge is constructed, which was completed in the summer of 2018. In 2018, the LID Board of Directors appointed a subcommittee to review options to widen the channel between North Center and North Lindstrom Lakes.

The following principles will help guide a potential channel maintenance project:

1. No dredging will occur.
2. The channel area to Bull Lake and Bull Lake itself will remain unchanged.
3. There will be no significant change to lake levels.
4. The project will not significantly lower the water quality of North & South Lindstrom Lakes.
5. The new County Road 20 bridge will be high enough to allow passage of pontoon boats with the canopy down during times of high water.
6. The goal is to minimize project costs while providing maximum benefit to the Chisago Lakes Area community.
7. An Environmental Assessment Worksheet will be completed.
