

COUNTY ROAD 24

GULLY STABILIZATIONS

A pair of gullies on the edge of the road along County Road 24 in North Chisago Lakes Township were fixed in May of 2016. The Chisago County Public Works Department completed the project as designed by the consulting engineer.

Two rock lined channels were built to allow water to pass through an energy dissipating channel rather than running over bare soil. This channel will reduce erosion and help reduce the amount of sediment and phosphorus reaching the wetlands at the immediate outlet and Blomquist Creek (which empties into the Sunrise River) just downstream from the project.

Partners:

Chisago County
Chisago Lakes Lake Improvement District
Chisago Soil & Water Conservation District

Pollution Reduction:

Total Suspended Solids: 1.4 tons/year
Total Phosphorus: 1.4 lb/yr
(BWSR Spreadsheet)

Targeted Water:

Sunrise River

Completion Date:

July 2016

May I Visit?

Yes – The project is in the road right-of-way on County Road 24 and visible from the road.
